

TRAINING DAYS 2021

Reach for the Summit | February 8-11

**Deploying & Maintaining a Polyglot  
Microservices App on a Managed  
Kubernetes Solution**

   [rmoug.org](https://rmoug.org)

# Adao Oliveira Junior

**Senior Principal Product Manager** at Oracle

Former **Solutions Architect** for Oracle A-Team

Working with Developer Adoption and Experience  
for Cloud Native solutions

# Agenda

1. Introduction
2. Prerequisites: Enable your Free Trial tenancy
3. Lab 1: Setup your Cloud Environment
4. Lab 2: Deploy the Microservices App
5. Lab 3: Monitoring your deployment
6. Cleanup

# Introduction

Learn how to deploy applications into a cloud-native microservice-based development framework leveraging the Oracle Cloud Native solutions. You will deploy an eCommerce application with polyglot microservices for each component of a highly scalable architecture leveraging Kubernetes and Oracle Cloud Infrastructure components.

# Introduction

## Objectives

- Create a Kubernetes Cluster on OKE
- Deploy an eCommerce microservices-based solution to Kubernetes (MuShop App) using [helm](#)
- Explore your App
- Expose your app publicly
- Monitor your Kubernetes Cluster and the deployed App
- Clean up the deployments

# Enable your Free Trial

The screenshot shows the Oracle Cloud Free Tier registration page. At the top, there is a navigation bar with the Oracle logo and the text "Cloud Infrastructure". Below this, the page is divided into two main sections. On the left, there is a green sidebar with the heading "Oracle Cloud Free Tier" and a sub-heading "Get started with...". Underneath, it lists "Always-free access to essential services:" which includes Autonomous Database, Virtual machines, and Object storage. It also lists "Plus, \$500 of credits for 30 days to use on even more services:" which includes Container Engine for Kubernetes, Analytics Cloud, and Data Integration. The main content area is titled "Account information" and contains several input fields: "Country/Territory" (a dropdown menu), "Company Name" (a text field with "Optional" written below it), "First Name" and "Last Name" (two text fields), "Email/Username" (a text field), "Password" (a text field with an eye icon to toggle visibility), "Confirm Password" (a text field with an eye icon), "Cloud Account Name" (a text field), and "Home Region" (a dropdown menu). At the bottom of the form, there is a "Terms of Use" section with a small paragraph of text and a "Continue" button. The footer of the page includes links for "Terms of Use and Privacy", "Cookie Preferences", and "Ad Choices", along with the copyright notice "Copyright © 2020, Oracle and/or" and a small red chat icon.

- Participants on the allowlist for easy registration
- Access to a wide range of Oracle Cloud services for 30 days, including Databases, Analytics, Compute, and Container Engine for Kubernetes
- \$500 credit
- Always Free resources on your home region
- Up to eight instances across all available services
- Up to 5 TB of storage

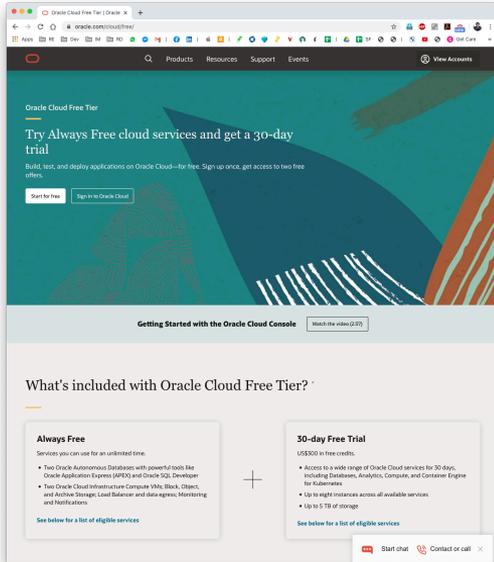

# Enable your Free Trial

Attendees with reserved seats go to: <http://bit.ly/rmoug-trial>

All others: <https://go.oracle.com/rmoug2021>

Register by February 15<sup>th</sup> to enjoy the \$500 promo

# Oracle Cloud Infrastructure Regions

## Why should business leaders care?

“Cloud native technologies empower organizations to build and run scalable applications in modern, dynamic environments such as public, private, and hybrid clouds. Containers, service meshes, microservices, immutable infrastructure, and declarative APIs”

### CNCF Cloud Native Definition

#### Cloud Native helps:

1. Independently invest and evolve features according to business needs.
2. Break Monolithic applications into resilient, manageable, observable systems.
3. Improve developer productivity, make high impact changes frequently.
4. Open Source technologies make solutions portable across clouds and avoids lock-in.

## Governance

IAM, Tagging, Cost Analysis

## Security

IAM, Audit, KMS, CASB

## Management

Monitoring, Notifications, Alarms

## Automation

Resource Manager, Ansible

[Analytics](#) / [Integration](#) / [SOA Suite](#) / [Identity](#) / [Management](#) / [Content](#) / [API Platform](#) / [Developer](#) / [Visual Builder](#) / [Digital Assistant](#) / [DataFlow](#) / [Data Science](#) / [Data Safe](#)

### Containers

#### Containers and Kubernetes

Fully managed, certified Kubernetes service with Docker containers

### Data Movement

#### Storage appliance, Data Transfer

Software NAS gateway, data ingest service with full chain of custody (HDD or appliance)

### Autonomous Database

#### Transactions, Data Warehouse

Fast provisioning. Automatic tuning, patching, securing. 99.995% availability.

### Cloud Native

#### Events, Streaming, Functions

Fully-managed FaaS, event-triggered functions, high-volume data ingest, notifications

### Compute

#### Bare metal/VM, CPUs/GPUs

Up to 64 CPU cores, 8 GPUs, 768 GB RAM, 51 TB local NVMe SSD, 5M IOPS, AMD and Intel processors

### Storage

#### NVMe, Block, File, Object, Archive

Predictable IOPS Block Storage for up to 98% less, storage for whole lifecycle

### Database

#### Bare metal, VMs, Exadata

Millions of TPS; Full RAC and Active Data Guard support

### Networking

#### VCN, LBaaS, FastConnect, VPN

Isolated networks with reserved IPs, security lists, firewalls, lowest cost private connectivity

Public regions

Government regions

### Developer Tools

- GitHub
- GitLab
- Jenkins
- maven
- dockerhub
- Visual Builder Platform

### Any Language, Any Framework

### Autonomous Database

- Autonomous Data Warehouse
- Autonomous Transaction Processing
- Autonomous JSON Database

### Management and Security

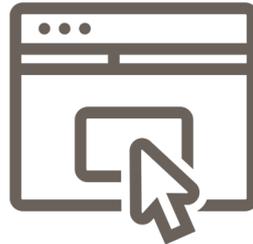

- Oracle Management Cloud
- Oracle Identity Cloud
- nirmata
- NeuVector
- Prometheus
- Grafana

### Oracle Cloud Infrastructure

- Compute
- Storage
- Networking
- Load Balancer
- Edge
